## **DETAILED ACTION**

1. This is response to the Amendment filed on March 24, 2005. An Office Action is provided as follows

### ***Allowable Subject Matter***

2. Claims 2-12, 14-18, 20, 42-50, 52-57 are allowed and renumbered as 1-32.
3. The following is an examiner's statement of reasons for allowance:

The present invention related to a touch sensitive device for scrolling document on a display screen. Each independent claim identifies the uniquely distinct features as follows:

As per claim 5,

a central scrolling area extending along a longitudinal axis; and first and second end scrolling areas positioned along the longitudinal axis on opposed sides of the central scrolling area, said first and second end scrolling areas being physically separate and spaced from the central scrolling area; and

first and second scroll input surfaces positioned immediately adjacent to said central scrolling area, and on opposing sides of and spaced from said central scrolling area in a direction perpendicular from said longitudinal axis, said first and second input surfaces enabling the scrolling of a document in opposite directions along a first axis.

As per claim 20,

a central scrolling area extending along a longitudinal axis and having a width in a direction perpendicular to the longitudinal axis, first and second scrolling area positioned along the longitudinal axis on opposed sides of the central scrolling area, said first and second end scrolling areas having a width that differs from the width of the central scrolling area, and

first and second scroll input surfaces positioned immediately adjacent to said central scrolling area, and on opposing sides of and spaced from said central scrolling area in a direction perpendicular from said longitudinal axis, said first and second input surfaces enabling the scrolling of a document in opposite directions along a first axis and wherein said device is part of a keyboard including an alphanumeric section.

As per claim 50,

a first touch-sensitive device having an elongated touch sensitive input surface;  
a second touch-sensitive device having an elongated touch sensitive input surface, said second-touch sensitive device being spaced from and adjacent to said first touch-sensitive device; and

a physical divider disposed between first and second touch-sensitive devices, said divider having a contoured edge immediately adjacent the elongated touch sensitive input surface of at least one of said first and second touch-sensitive devices;

wherein said contoured edge is sawtoothed shaped assisting the user in locating a position between a top and a bottom of at least one of the first and second touch-sensitive devices.

The closest prior art of Yates et al. (U. S. Patent No. 6,225,976) and Batio (U. S. Patent No. 6,081,207) show similar systems, but either singularly or in combination, fail to anticipate or render above quoted limitations obvious.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
